

Advanced Technology Engineer

Batch Eligible: 2027 Passouts

Management Level: 11

ROLE OVERVIEW

We are building the next generation of AI-native engineering talent—engineers who use AI as a core part of how they work, not as an add-on.

As an **Advanced Technology Engineer** you will design, build and ship production-grade software across the full stack, using AI-assisted tooling as standard daily practice alongside your core software engineering skills. You will work on real client programmes across industries, using modern AI development tools, cloud-native technologies and software engineering best practices to deliver scalable, production-ready solutions.

This role follows a **hire-to-train** model, providing structured learning, AI certifications and hands-on delivery experience to develop you into a client-facing AI Native Software Engineer. This wording intentionally adopts the repository positioning while making it appropriate for campus hiring.

What we need?

We would love you to have:

- Strong software engineering fundamentals across front-end, back-end and API development.
- Proficiency in at least one programming language such as Python, Java or TypeScript.
- Understanding of Git, CI/CD, cloud fundamentals (AWS, Azure or GCP), databases and Agile delivery.
- Use AI coding assistants as part of software development and demonstrate curiosity in applying AI to improve engineering productivity.
- Apply **quality engineering** practices including unit testing, test automation, secure coding, peer reviews and production-readiness checks.
- Validate AI-generated outputs, understand AI limitations and exercise sound judgement before production use.
- Build reusable software components and contribute to engineering assets.
- Demonstrated capability through academic projects, internships, hackathons, open-source contributions or personal software projects.
- Strong analytical, problem-solving and communication skills.
- Multi-disciplinary mindset with the ability to learn new technologies quickly.
- Ability to work collaboratively in Agile teams and contribute to successful client delivery.

Accenture has not authorized any agency, company or individual to either collect money or arrive on any monetary arrangement in exchange for a job at Accenture. Accenture's criterion for hiring candidates is merit. Any agency, company or individual offering employment with Accenture in exchange for money is misrepresenting their relationship with Accenture, which has not authorized any such action. If you are approached by any entity or individuals who demand money or any other form of compensation in return for a job offer at Accenture - even if they present themselves as representatives or employees of Accenture - please send the details to Accenture Business Ethics Line <https://businessethicsline.com/accenture>
